

ASSET & INVENTORY REGISTER · SRI LANKA

Anything. Anywhere. Secured in one tap.

Scan a QR label with your phone and the asset is logged — where it is, who holds it, what it cost, what it looks like. No spreadsheets, no paper register, no guessing at audit time.

1 week free — full features, no card required

One-tap scan

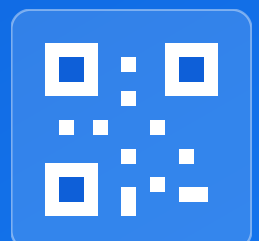

Phone camera in, record out.
Under 10 seconds per item.

Works offline

Store rooms and basements included. It syncs when you're back.

Audit-ready

Every change kept, with who and when. Nothing can be quietly deleted.

THE PROBLEM

Your asset register is a spreadsheet nobody trusts

Most offices, schools, clinics and workshops track equipment in an Excel file one person maintains. It goes stale the week it is made — and the cost shows up later.

Laptops and tools walk out and nobody can say when, or who signed for them.

Auditors ask for proof of purchase and value; the file has neither a photo nor a receipt.

Two branches keep two versions, both wrong, and insurance claims get argued down.

THE ANSWER

Label it once. Scan it forever.

1

Print the labels

AssetSnap generates QR label sheets with running asset codes. Stick one on each item — desk, laptop, drill, projector.

2

Scan to capture

Open the app, point the camera, add a photo, location and holder. The record is created in seconds, even with no signal.

3

Know at a glance

Search, filter and export the whole register. Movement history, warranty dates and values, ready for audit or insurance.

Built for how work actually happens

Installs as an app on any phone — no app store, no IT project. Locations nest Floor → Room, so "where is it" has a real answer. Staff get their own logins with roles, so a storekeeper cannot rewrite prices.

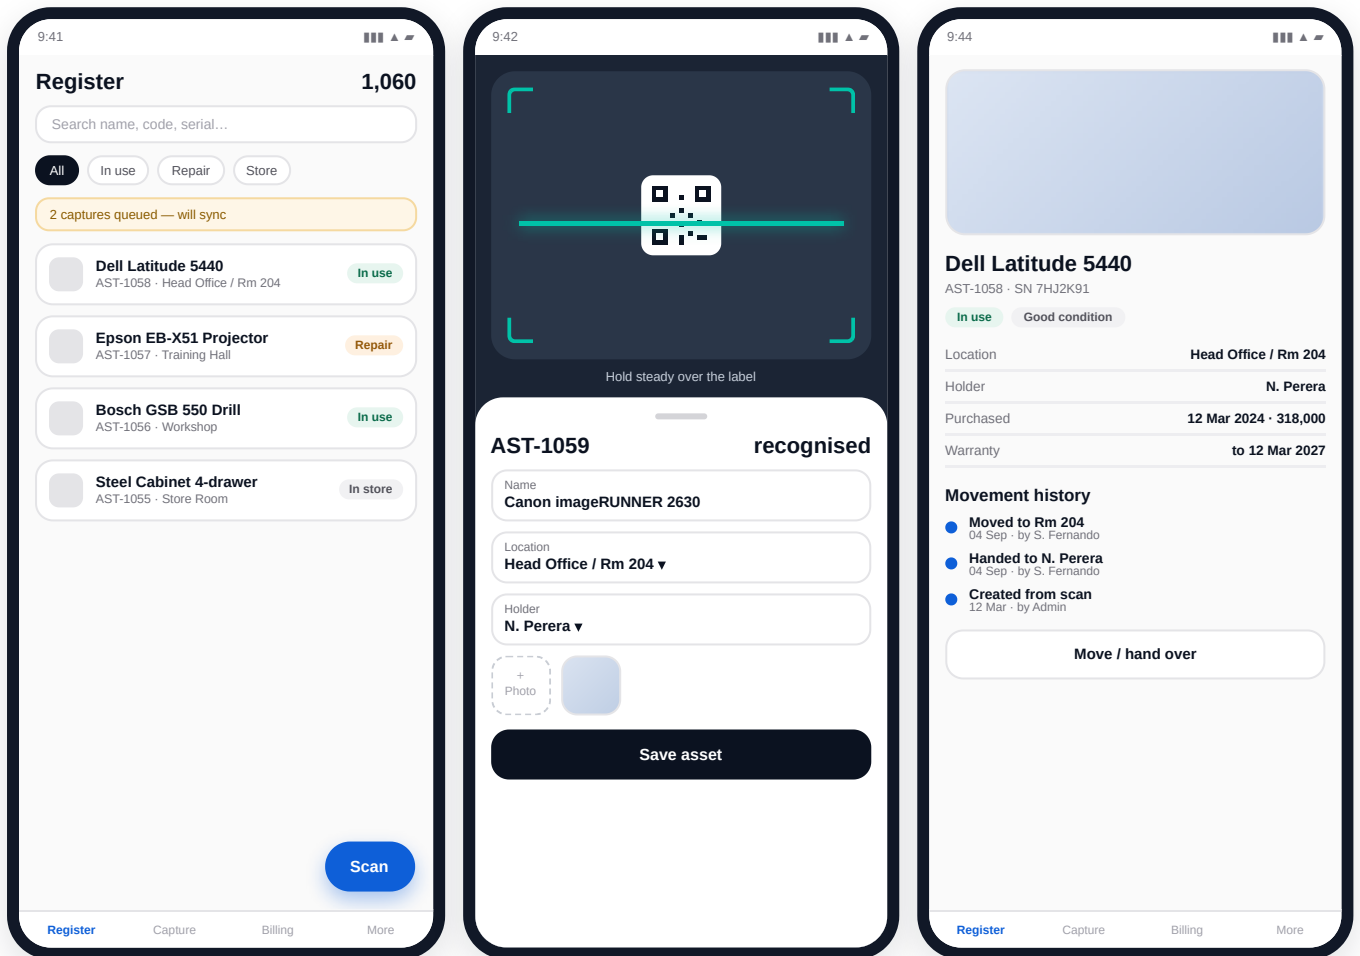

Your data stays yours

Each organisation is isolated at the database level. Every edit is written to an append-only audit trail — no route deletes it, at any role. Assets are never hard-deleted. Export to CSV whenever you want.

ON THE PHONE

Three screens. That's the whole job.

Installs from the browser as an app. Big targets, one column, readable in a store room with one hand full.

Register — search, filter, and anything still queued offline shown on top.

Capture — scan, confirm, save. Works with no signal; it syncs later.

Asset detail — value, warranty and an audit trail that cannot be edited away.

No app store

Open the link, tap "Add to home screen". Rolling it out to ten staff takes an afternoon, not an IT project.

No signal, no problem

Captures queue on the phone and sync the moment you have data. Nothing is lost in the basement.

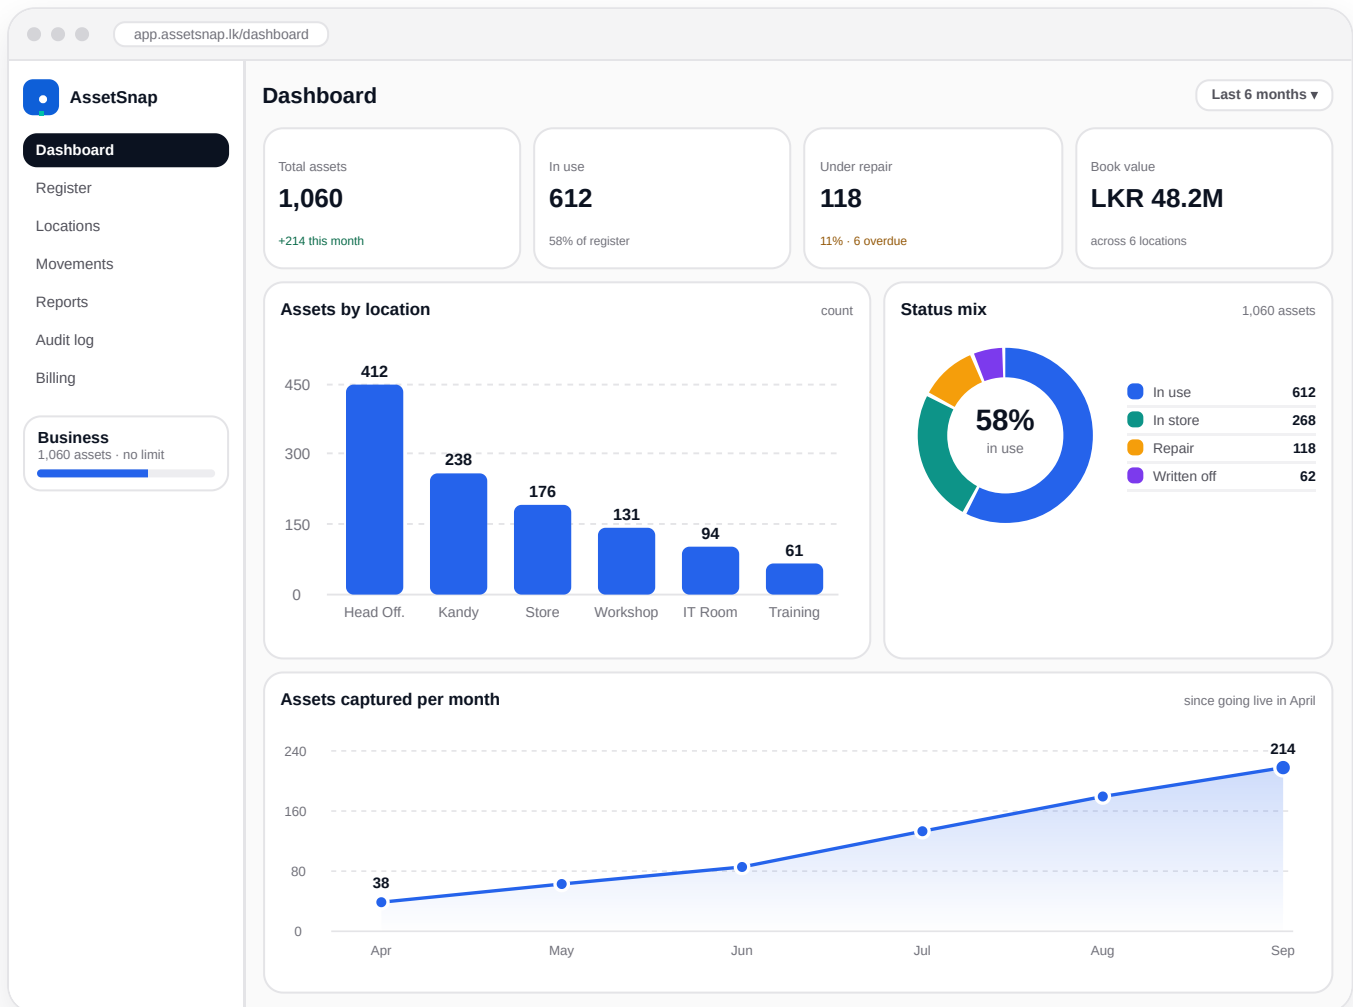

Right people, right rights

Owner, admin, staff and viewer roles. A storekeeper can move an asset but cannot rewrite its value.

ON THE DESKTOP

The numbers the owner actually asks for

The same register on a laptop, with the counts, the mix and the month-by-month picture on one screen — and every view exports to CSV, Excel or PDF.

Figures shown are an illustration of the dashboard, not a customer's real data.

Reports that leave the app

Register, valuation, movement and warranty-expiry reports as PDF or Excel — the file the accountant and the auditor both ask for.

Label sheets on A4

Print QR codes for new assets straight from the browser, on plain sticker sheets from any stationer.

Two branches, one register

Nested locations and per-branch filters, so Kandy and Colombo stop keeping two versions of the truth.

PLANS

Start free for a week. Stay free if you're small.

Every new account opens with **7 days of Starter, free and complete** — labels, reports, the lot. No card at sign-up. When the week ends, keep going on Free or move up. Prices in LKR, per month.

	Free	Starter	Business
Price / month	0	2,500	7,500
Assets tracked	100	1,000	Unlimited
Staff logins	2	10	Unlimited
Locations	5	Unlimited	Unlimited
Photos per asset	1	5	10
Storage	200 MB	5 GB	25 GB
Mobile scan capture & offline	✓	✓	✓
CSV export	✓	✓	✓
QR / barcode label sheets	—	✓	✓
PDF & Excel reports	—	✓	✓
Custom fields	—	5	Unlimited
Audit trail kept	30 days	1 year	Forever
API access	—	—	✓
Support	Community	Email	Priority

Pay by card through PayHere, in rupees. Cancel any time — your data stays readable and exportable. Founding customers keep a permanent discount recorded on their account.

Try it on 20 real assets this week

That is all it takes to see the difference. Sign up, print a sheet of labels, walk one floor. If it does not save you the afternoon you usually lose to the spreadsheet, walk away — nothing to cancel.

BRAND BASICS

How AssetSnap should look and sound

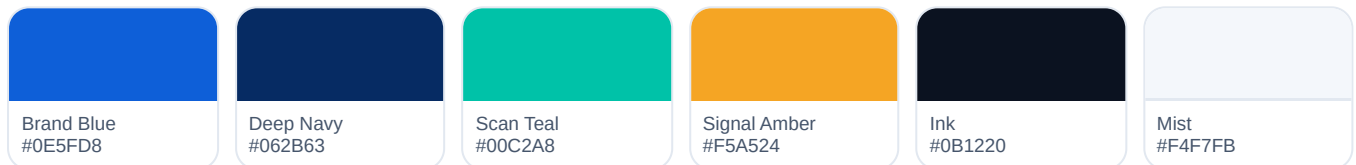

The mark

A rounded square (the asset label) with a scan line through it. Keep clear space of at least the mark's own corner radius on every side; never stretch it, never place it on a busy photo. Minimum size 16 px on screen, 6 mm in print.

The wordmark

"AssetSnap" set as one word, heavy weight, tight tracking. "Asset" in ink, "Snap" in brand blue on light backgrounds; "Snap" in teal on dark. Never hyphenate, never all-caps it in body text.

COLOUR

Blue carries the brand and every primary button. Teal is for confirmation and the scan motif only. Amber marks the free trial and anything needing attention — never as a background for body text.

TYPOGRAPHY

One sans-serif family throughout — Inter, or Helvetica/Arial as the safe fallback.

Headings: extra-bold, tight tracking. Body: regular, 1.5 line height. Numbers in tables right-aligned. No script fonts, no outlines, no drop shadows.

Say it like this

- Plain, short sentences. Rupees, not "pricing tiers".
- Concrete nouns: laptop, drill, projector, store room.
- Claim only what the product does today.
- Lead with the one tap and the free week.

Not like this

- "Revolutionary AI-powered asset intelligence platform."
- Fear-selling or invented statistics.
- Jargon: synergy, holistic, end-to-end ecosystem.
- ALL CAPS shouting or stacked exclamation marks.

One line to remember

Anything, anywhere — secured in one tap.

Short forms: "Scan it. Know it." for social; "Your asset register, in your pocket." for print.
